Which sorbent do I need?

Choosing between universal and oil only sorbents can be relatively straight forward:

- Universal sorbents absorb all fluids (oils, coolants, solvents, water and water-based liquids).
- Oil only sorbents repel water making them ideal for outdoor and environmental applications.

However, determining the absorbency level of the pad or roll you need is a sliding scale of performance versus cost.

- While light pads are the most cost efficient, they should only be used for smaller leaks and spills.
- Heavy or premium will absorb the most and should be used for larger concerns, oversprays or well-traveled areas.
- If you know you will have a lot of foot traffic, we recommend a multi-ply product.

Absorbent Rugs

Traction Mat stays in place - no gaps, ripples or overlaps. These universal "sticky" rugs absorb a wide variety of water and oil-based fluids — making them ideal for walkways near equipment or close to exits and inclement weather.

The **recycled fiber rug roll** is an economy industrial rug that absorbs oil, water, hydraulic fluid, coolants, solvents and many other liquids without looking dirty.

Sorbent Socks

Whether your equipment leaks or creates excess condensation, sorbent socks are flexible absorbents designed to wrap around cases, machinery or any equipment that may create a slip hazard alongside walkways.

Wipers

The Wiper^{GT} Series blends strength, absorbency and durability to give your operation a new workhorse for tackling everyday challenges.

Available in two constructions — spunlace and hydrospun, GT Series wipers are a tough, clean and dependable alternative to shop rags.

Duck Ponds

Quick and convenient spill containment for vehicles and equipment.

Foldable mini berms (duck ponds) are compact and easy to store but deploys in a moment's notice to respond to a spill.

Reclaimed Rags

These handy rags are an economical, general purpose wipe and absorbent. Sold in bulk by weight, the compressed bags increase your pallet quantities — reducing your freight cost per pack.

All of our reclaimed rags are scanned for metal to ensure no stray metals (buttons, zippers, buckles, etc.) are attached and no potentially dangerous foreign materials were recycled with the clothes, sheets, towels, etc.
